PROFESSIONAL SUMMARY

Backend Java developer in training, pursuing a Software Engineering degree at Estácio (2024-2028). Practical experience building secure, documented REST APIs with Java 21, Spring Boot, Spring Security (JWT), JPA/Hibernate, PostgreSQL, and MongoDB. Applied automated testing (101+ tests with JUnit 5 and Mockito) and Docker containerization in real portfolio projects. Seeking an internship or junior position in backend development to apply and expand my skills in a professional environment.

TECHNICAL SKILLS

Languages & Frameworks: Java 21, Spring Boot 4, Spring Security, Spring Data JPA/Hibernate, Bean Validation

Databases: PostgreSQL, MongoDB

Authentication & Security: JWT (JSON Web Token), RBAC (role-based access control)

Automated Testing: JUnit 5, Mockito, MockMvc, @WebMvcTest

DevOps & Tools: Docker (containerization and publishing images to registry), Kubernetes and Docker Swarm (orchestration fundamentals), Git, GitHub, Maven, Postman

API Documentation: Swagger / OpenAPI 3

Best Practices: Clean Code, Conventional Commits, constructor injection, layered architecture (Controller/Service/Repository)

EDUCATION

Bachelor's Degree in Software Engineering | Estácio | 2024 - 2028

CERTIFICATIONS

- Java COMPLETE - Object-Oriented Programming + Projects - Udemy (Nélio Alves), 54h, Feb/2026
- Testing with JUnit 5, Mockito and Spring Boot (REST APIs) - Udemy (Valdir Cezar)
- Docker for Developers (with Docker Swarm and Kubernetes) - Udemy (Matheus Battisti)

LANGUAGES

- Portuguese - Native
- English - Intermediate (technical reading: documentation, articles and repositories)

PROJECTS

FinanceSync API

Personal Project (Portfolio) - Backend Java · Spring Boot 4 · JWT · PostgreSQL · Docker | 2025 - 2026

- REST API for personal finance management with 4 entities (user, account, transaction, category),

JWT authentication and role-based access control (RBAC); validation with Bean Validation and documentation via Swagger/OpenAPI.

- Implemented real-time currency conversion by integrating the Frankfurter API, using BigDecimal for monetary precision.
- Wrote 101 automated tests (JUnit 5, Mockito, MockMvc, @WebMvcTest) covering service and controller layers.
- Containerized the application with Docker and published the image to GitHub Container Registry (GHCR).

TaskFlow API

Personal Project (Portfolio) - Backend Java · Spring Boot 4 · JWT · PostgreSQL | 2025

- REST API for task management with stateless authentication via Spring Security + JWT and role-based access control (RBAC).
- Layered architecture (Controller, Service, Repository), persistence via JPA/Hibernate and PostgreSQL, documentation with Swagger/OpenAPI.

LifeSync API

Personal Project (Portfolio, in development) - Backend Java · Spring Boot 4.1 · Spring Security | 2026

- Project under development applying Java 21, Spring Boot 4.1, Spring Security and JPA/Hibernate with PostgreSQL, following a feature-package-based architecture.

Chess System in Java

Core Java, OOP | 2024-2025

- Complete chess game implementation with inheritance, polymorphism, encapsulation and abstraction, including special move logic (castling, en passant, promotion).

Spring Boot Workshops - JPA & MongoDB

Two REST API projects | 2025

- Exploring relational persistence (JPA/Hibernate) and NoSQL (Spring Data MongoDB), focusing on good modeling practices.
